Sammeli Liikkanen

At the moment Sammeli is responsible for digitalising the way Orion is researching and developing new more personalised treatments for patients.

The main areas that he's heavily involved hands-on are transforming pharmaceutical research and early development with data, AI/ML, in-silico, digital endpoints and biomarkers.

He is also focusing on the artificial intelligence (AI); both from the internal perspective but also from the customer perspective. Overall, the more iterative use of data and data science in order to make R&D processes more accurate and faster is a great passion for him.
